

Please amend the present application as follows:

**Claims**

The following is a copy of Applicant's claims that identifies language being added with underlining ("\_\_\_") and language being deleted with strikethrough ("——"), as is applicable:

1-10. (Canceled)

11. (Currently amended) A method practiced by a ~~printing device~~ printer for printing a form, the method comprising:

accessing form imaging data from at least one store via a network with the ~~printing device~~ printer;

retrieving the form imaging data from the at least one store with the ~~printing device~~ printer; merging the retrieved form imaging data with static form data already stored on the ~~printing device~~ printer to generate a completed form; and

printing the form imaging data along with the already stored static form data together as a hard copy form, such that printing a hard copy form is possible without the need to send the static form data to the ~~printing device~~ printer and such that a copy of the static form data need only be stored on the ~~printing device~~ printer.

12. (Original) The method of claim 11, wherein the at least one store comprises a graphic store and a composition store.

13. (Currently amended) The method of claim 11, wherein the at least one store is associated with an imaging service stored on the ~~printing device~~ printer that is configured to facilitate form completion.

14. (Currently amended) The method of claim 13, wherein the imaging service comprises a network-based form processing service hosted by the ~~printing device~~ printer.

15. (Previously presented) The method of claim 11, wherein accessing form imaging data comprises accessing imaging data through use of an imaging extension.

16. (Original) The method of claim 15, wherein the imaging extension comprises part of a user browser.

17. (Currently amended) The method of claim 15, wherein the imaging extension comprises part of a network-based printing service hosted by the ~~printing device~~ printer.

18. (Currently amended) The method of claim 17, wherein the printing service is hosted by an embedded server of the ~~printing device~~ printer.

19. (Currently amended) A system stored on a ~~printing device~~ printer for printing a form, the system comprising:

means provided on the ~~printing device~~ printer for accessing form imaging data from at least one store via a network;

means provided on the ~~printing device~~ printer for retrieving the form imaging data from the at least one store;

means for merging the retrieved form imaging data with static form data already stored on the ~~printing device~~ printer to generate a completed form; and

means for printing the form imaging data along with the already stored static form data together as a hard copy form;

wherein printing a hard copy form is possible with the system without the need to send the static form data to the ~~printing device~~ printer and wherein a copy of the static form data need only be stored on the ~~printing device~~ printer.

20. (Original) The system of claim 19, wherein the means for accessing form imaging data comprises an imaging extension.

21. (Original) The system of claim 20, wherein the imaging extension comprises part of a user browser.

22. (Currently amended) The system of claim 20, wherein the imaging extension comprises part of a network-based printing service hosted by the ~~printing device~~ printer.

23. (Currently amended) The system of claim 22, wherein the printing service is hosted by an embedded server of the ~~printing device~~ printer.

24. (Currently amended) A ~~printing device~~ printer, comprising:  
memory including logic configured to access form imaging data from at least one store via a network, retrieve the form imaging data, merge the received data with static form data already stored on the ~~printing device~~ printer to generate a completed form, and print the form imaging data along with the already stored static form data together as a hard copy form;

wherein printing a hard copy form is possible with the ~~printing device~~ printer without the need to send the static form data to the ~~printing device~~ printer and wherein a copy of the static form data need only be stored on the ~~printing device~~ printer.

25. (Currently amended) The ~~printing device~~ printer of claim 24, wherein the logic comprises a network-based printing service.

26. (Currently amended) The ~~printing device~~ printer of claim 24, wherein the logic comprises an imaging extension that is configured to access the at least one store.

27. (Currently amended) The ~~printing device~~ printer of claim 24, further comprising an embedded server.
